Siding

Number of squares _____ Type of housewrap _____

Application Tear off Overlay

Type Vinyl Wood Composite Steel/aluminum Other _____

Is fanfold foam product to be used? Yes No

If yes, provide specific brand name, type, thickness and the perm rating. _____

Will the re-siding project involve removal and re-installation of any of the following items?

Exterior lights, air conditioner disconnect switches, saver switches, electrical meters, electrical service raceways and cables or similar devices? Yes No

Will the re-siding project involve installation of any new lighting, wiring, junction boxes, electrical devices or equipment? Yes No

If the you answered yes to either of the above questions, an electrical permit and inspection(s) is required in conjunction with the siding project. The work must be done by qualified electricians, as established by state statute, or a homeowner who will physically perform the work and who owns and occupies the residence where the re-siding is being done. The electrical rough-in inspection must be approved prior to requesting the required housewrap inspection.

Description of work _____

Please read and sign

I hereby apply for a building permit and I acknowledge that the information above is complete and accurate; that the work will be in conformance with the ordinances and codes of the City of Bloomington and with the Minnesota Building Codes; that I understand this is not a permit but only an application for a permit and work is not to start without a permit; that the work will be in accordance with the approved plan in the case of all work which requires review and approval of plans.

Date

Important notice, please read!

As of March 15, 2004, the City of Bloomington requires that you have an inspection of the weather-resistant barrier, commonly known as housewrap.

Inspections will apply to the following:

- All new construction residential or commercial.
- Any new additions.
- Any re-siding projects where the existing exterior covering is being removed.

Note: Water resistive barriers are not required for detached un-conditioned accessory buildings.

Note: The Building and Inspection Division will not accept pictures as a substitute for an inspection.

Failure to call for the required inspection(s) will require that a MINIMUM 8 x 8 foot section of siding be removed. The building inspector will determine the area. If within that area, the manufacturer's installation instructions have not been followed, all the siding shall be removed and the water-resistant barrier corrected. A reinspection of the corrected installation is required.

Prepare for your inspection

- Your permit card with the manufacturer's installation instructions must be on site for the housewrap and final inspection.
- If you should change your mind about the product that was approved by the City for your permit, you must have the installation instructions at the jobsite.
- One-story houses will have one housewrap inspection and a final inspection.
- Two-story houses where scaffolding or other equipment must be set up could potentially have a number of inspections. (At a minimum, one side must be completely installed.)
- All flashing must be in place for the housewrap inspection.
- Do not deviate from the manufacturer's installation instructions.
- Any rips, tears and holes should be repaired per the instructions and done by the time of inspection.
